

HESCOM DTLMS

Technical Presentation

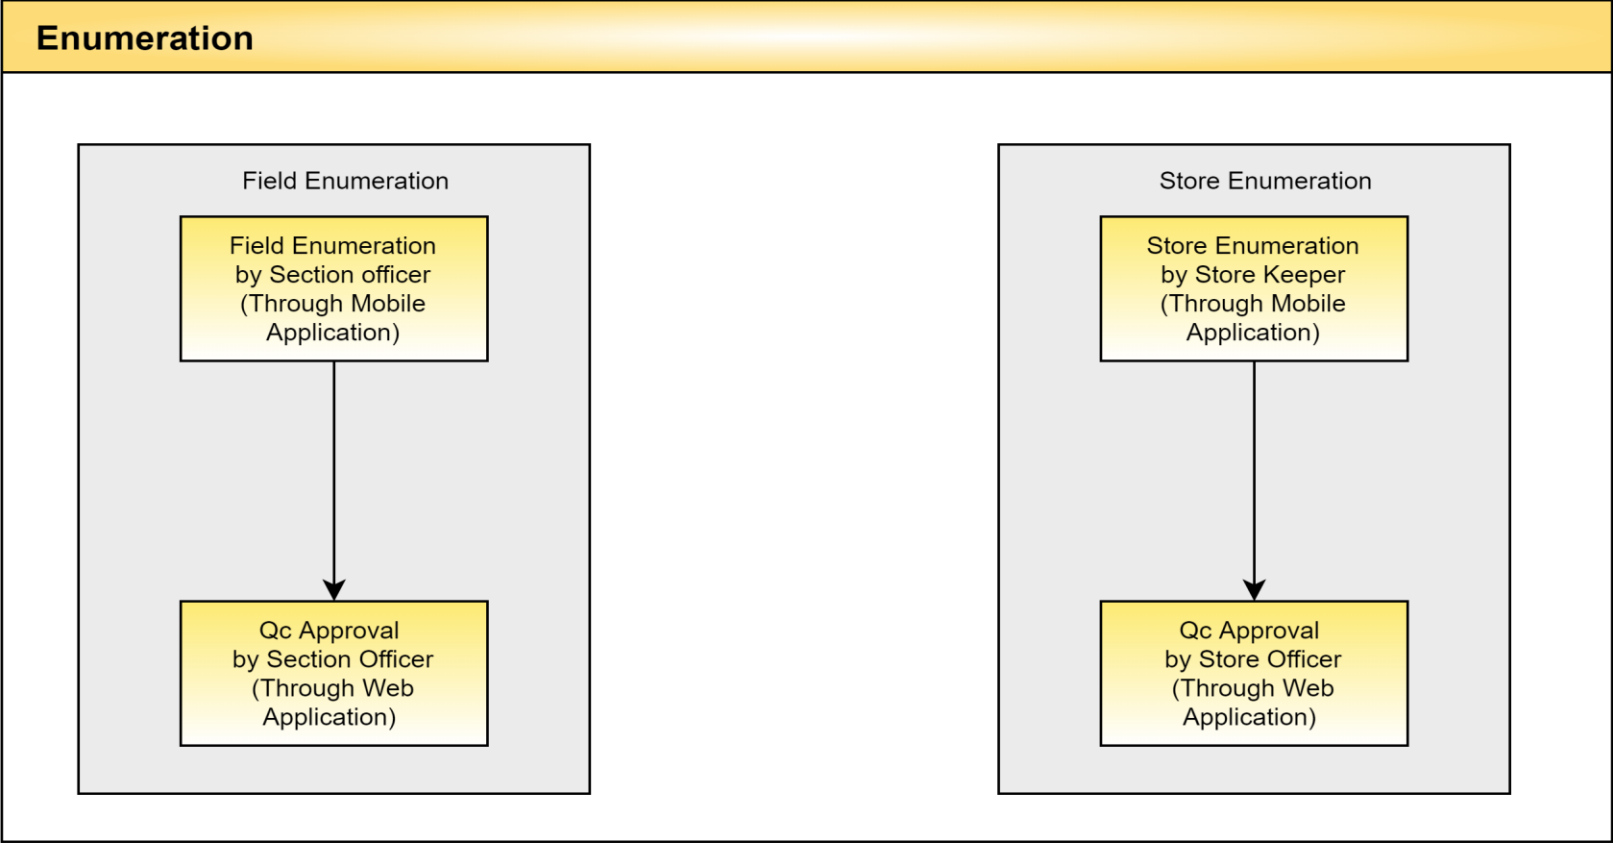

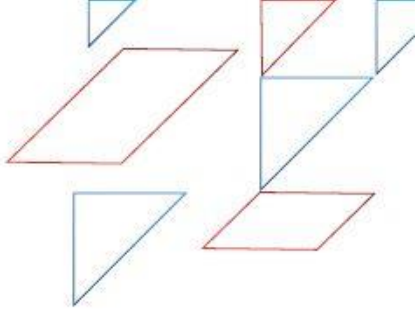

DTLMS (Distribution Transformer Life Cycle Management software)

- A complete end to end IT Solution for the lifecycle management of the Distribution Transformer from the day of it's procurement till Scrap .
- Through DTLMS, DESCOM will be able to easily analyze the frequency of transformer failures with possible reasons. This shall help the DISCOM to reduce the failures and better manage them.
- Continuous monitoring of DTLMS data and early detection would help extend the transformer's life and save the utility the expenditure on costly replacements.
- This application helps to avoid the time latency in failure, repair, procurement and buffer processing.
